Engineering & Environmental Consultants

# Shaping the Future

## Waterman Group's work is at the forefront of sustainable engineering and environmental planning

*Waterman Group provides a diverse range of sustainable services to support our client's development aspirations. By keeping abreast of the latest technology and being innovative in its approach to sustainable development Waterman Group maintains its considerable reputation.*

### Climate Change

Waterman promotes the future proofing of developments by addressing and advising clients of the potential risks associated with climate change and global warming; flood risk and building thermodynamics being part of this integrated service.

### Planning

To assist in the planning process Waterman Group offers Sustainability Appraisal's and Environmental Assessments. Waterman Group also undertakes BREEAM and EcoHomes accreditations and assists in the development of Environmental Management Systems.

### Design

Sustainable project design services are provided by the Waterman team. They assist with design solutions in mechanical and electrical engineering to provide energy efficient buildings and promote the use and reuse of materials in the development process.

### Transport

Travel plans and detailed transport assessments can be provided. Detailed design proposals can be developed to reduce traffic congestion and associated air and noise pollution.

### Energy

The Waterman Group has experience in innovative solutions to waste management and the generation of energy using renewable energy sources.

For full details of the Waterman Group's Sustainability services please contact **Peter Begbey** Director of Sustainability on **020 7928 7888** or visit **[www.waterman-group.co.uk](http://www.waterman-group.co.uk)**
